Week #1  
Week of  
September 7th

we will be starting looking at the Access Database next week. For students who need Access, it is available through the MSDN Alliance. Click on this link to get information: [MSDN Alliance Software](#)

You will receive an invitation from the college to the MSDN alliance .

I leave up the Smartboard Notes and audio lectures from previous semesters since much of the material is the same. You should look up Smartboard presentations on topics that you want to go over.

I record most of the classes where I deliver a lecture so you should always assume that the class is being recorded. If you want to know, just ask!

This week we are going to start looking at HTML and start to develop the basics of a portfolio. I am going to start looking at the HTML examples under examples. If you know HTML, you can elaborate on the basics I will present. If you are new to HTML, then we will start out with the basics.

***Assignments:***  
 Note: Assignments are not due until the week after they are assigned. You are welcome to pass them in early. Late assignments will loose points - see the syllabus for details.

Please go to this site and take this survey, it relates to the part of this course that deals with employability skills. The portfolio you are developing is also related to both employability and technology.

***Survey***  
 Check back because I will post a beginning HTML assignment later in the week.

# HTML

We are starting to learn html. The html shown here is a tag because it is enclosed in < and >. The end tag also has the /. See examples on the next few pages.

<html>

</html>

The screenshot shows a Windows Internet Explorer browser window with the address bar displaying `http://www.pgrocer.net/Cis17/HTML/HTMLIntro.html`. The page content includes the text "This is an introduction to HTML" and a blue link "To see the code for a page go to view source." A red arrow points from the link to a Notepad window titled "HTMLIntro[1] - Notepad". The Notepad window displays the following HTML code:

```
<html>
<head>
<title>Introduction</title>
</head>
<body>
<p>This is an introduction to HTML.</p>
</body>
</html>
```

Below the code, there are two blue text blocks:

Note that these examples are from my web site. There are a series of examples for HTML.

If you want to create a new web page, create it using notepad.

The Windows taskbar at the bottom shows the Start button and several open applications: "Introduction - Windo...", "Untitled \* - SMART N...", and "HTMLIntro[1] - Notepad". The system tray shows the time as 9:34 AM.

Introduction - Windows Internet Explorer

Introduction

This is an introduction to HTML.

HTMLIntro[1] - Notepad

```
File Edit Format View Help
<html>
<head>
<title>Introduction</title>
</head>
<body>
<p>This is an introduction to HTML.</p>
</body>
</html>
```

Note the open and close tags. The head tells about the page and gives the title that appears at the top. The body is where you put things you want to appear on the body.

start Introduction - Windo... Untitled \* - SMART N... HTMLIntro[1] - Notepad 9:36 AM
