FREE download of chapters 1 and 2

Click on ASP.NET 4 Introduction or ASP.NET 4 Programming Tutorial to download chapter 1 or chapter 2 in PDF format.

Chapter 1
An introduction to ASP.NET web programming
Chapter 1 gives you the background you need to start writing ASP.NET 4 web applications of your own. So you’ll find out how web applications work and what software you need to develop them, and how the code that represents the design of a web form is coordinated with the visual layout code that makes the web form look the way you want it to.

Chapter 2
How to develop a one-page web application
Chapter 2 teaches you how to use Visual Studio 2010 to design and build a one-page web application. That means you’ll see how to build a web form using web controls and HTML server controls, how to restrict user input using validation controls, and how to write the VB code for the web form’s code-behind file.
