We spent a lot of time experimenting with answering this question.
We had problems with this approach.
Save the Connection String to the Application Configuration File

Storing connection strings in your application configuration file eases maintenance and deployment. To save the connection string in the application configuration file, enter a name in the box and then click Next.

Do you want to save the connection string to the application configuration file?

Yes, save the connection as:

dbConnectionString

The test associated with the control.
We discovered that when we removed bin\debug it ran.
Now we are looking at how to set up two tables bound together.
Next we are putting three tables together to show in a grid - we ran into problems!
Indicates the name used to look up this column in the Columns collection of a DataTable.
This was using a view.
I choose donation and then added donor and drive.
